

JavaScript

A [client side scripting language](#) for adding [interactive content](#) to [Web sites](#). JavaScript is an essential part of other technologies such as [AJAX](#). However, the use of scripting languages on Web sites is problematic because [search engines](#) cannot “understand” complex scripts. That results in the inability to [crawl](#) JavaScript-based [navigation structures](#) on Web sites.

More Information

- [Article on interactive Web site content](#). Focus is on images, videos and flash. However, concepts also apply to JavaScript based content.
